

The trail map can be used to locate yourself in relation to the planned trail corridor in the field.

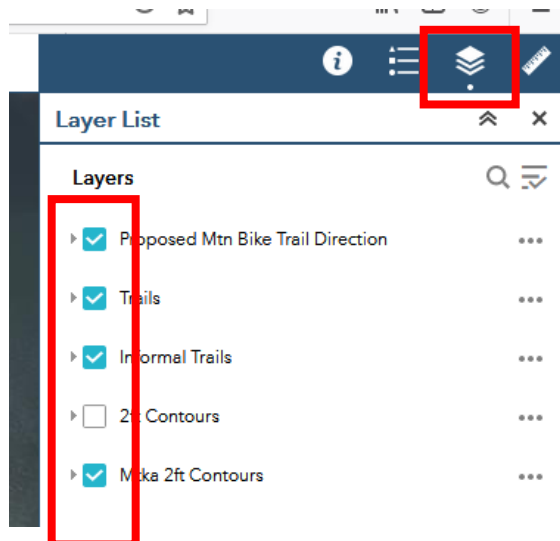

Once the map loads, there are a few tools to help you navigate the trail, including:

- Clicking the “My Location” button at the top left of the screen will find and display your location in relation to the trail.

Button looks like this.

- Checking and unchecking boxes in the layers tab on the upper right side of the screen allows you to decide which information is displayed.

- The measure tool allows you to click points on the map and measure the distance between them.
